

# DISABILITIES IN THE WORKFORCE

Approximately 15.11 percent of Arkansans age 18 to 64 have some type of disability (a total of 265,983), whether that be some kind of physical ailment, a developmental delay, or any of the numerous afflictions that affect millions of Americans on a daily basis. It stands to reason that many of these Arkansans are called upon to perform tasks in the workforce, but just how many, and in what capacity?

Source: American Community Survey, 2021. Statistics reflect total civilian non-institutionalized population aged 18 to 64 years.
